

KinderConnect – API/CMS Correcting Attendance

Providers using their CMS should review attendance and make corrections in their CMS **before** exporting to KinderConnect.

Only days without previous attendance entered (empty cells) can have attendance re-exported to KinderConnect.

Once attendance has been exported to KinderConnect, providers may see the following:

	Complete attendance has been exported to KinderConnect.
	Empty cells indicate no attendance was exported to KinderConnect for that day. Providers can enter the attendance in their CMS and re-export to KinderConnect. <i>This is the only attendance that can be corrected.</i>
	Attendance has one missing time for that day. A duplicate time may result in the system also indicating a missing time. Note: Only one entry time is required. A correction is not needed for attendance to be processed for the day.
	An invalid time pair indicates there is an OUT time before an IN time. Note: Only one entry time is required. A correction is not needed for attendance to be processed for the day.
